SC Johnson & Son là một công ty gia đình của Mỹ, đã có mặt hơn 130 năm trên thị trường. SC Johnson & Son không ngừng hỗ trợ người dân phòng chống bệnh sốt xuất huyết với 2 nhãn hiệu Raid & Off Raid All-Season. Chúng tôi là nhà sản xuất diệt côn trùng số 1 Việt Nam.

Nhàng thơm trừ muỗi Raid

Diệt trừ muỗi. Thích hợp dùng cả trong nhà và ngoài trời

FIGHT AEADES

BỆNH SỐT XUẤT HUYẾT LÀ GÌ?

Sốt xuất huyết là bệnh truyền nhiễm do vi-rút Dengue gây ra. Sốt xuất huyết hiện chưa có vắc-xin phòng chống và chưa có thuốc điều trị đặc hiệu nên có thể trở nặng và gây tử vong cho người bệnh.

NGUYÊN NHÂN GÂY BỆNH SỐT XUẤT HUYẾT

Do vi rút Dengue gây ra
Do muỗi vằn hút máu người bệnh SXH truyền sang cho người lành. Đây là nguyên nhân phổ biến và dễ tạo thành dịch nhất

7 DẤU HIỆN NHẬN BIẾT TRẺ BỊ XUẤT HUYẾT

01. Trẻ sốt cao đột ngột trên 38°C, kéo dài từ 2-7 ngày không dùng thuốc giảm hạ sốt như: Bê chiếu.
02. Trẻ xuất hiện những vết xuất huyết, Petechiae có đường kính dưới 5mm.
03. Chẩn đoán kết quả xét nghiệm huyết học: Hb giảm, Hct giảm, PLT giảm, tăng tiểu cầu bất thường.
04. Trẻ đau đầu dữ dội nhất, đau khớp.
05. Có dấu hiệu xuất huyết nội tạng: chảy máu mũi, chảy máu chân răng hoặc từ vị trí tiêm thuốc, chảy máu ở vùng niêm mạc, tiểu máu.
06. Trẻ có thể đau bụng dữ dội.
07. Trẻ nôn nhiều.

PHÒNG TRÁNH SỐT XUẤT HUYẾT BẰNG CÁCH NÀO?

Đậy kín các chum, bể chứa nước không để cho muỗi đẻ trứng.

Thả cá vào bát các vật chứa trong nhà để ăn bọ gậy

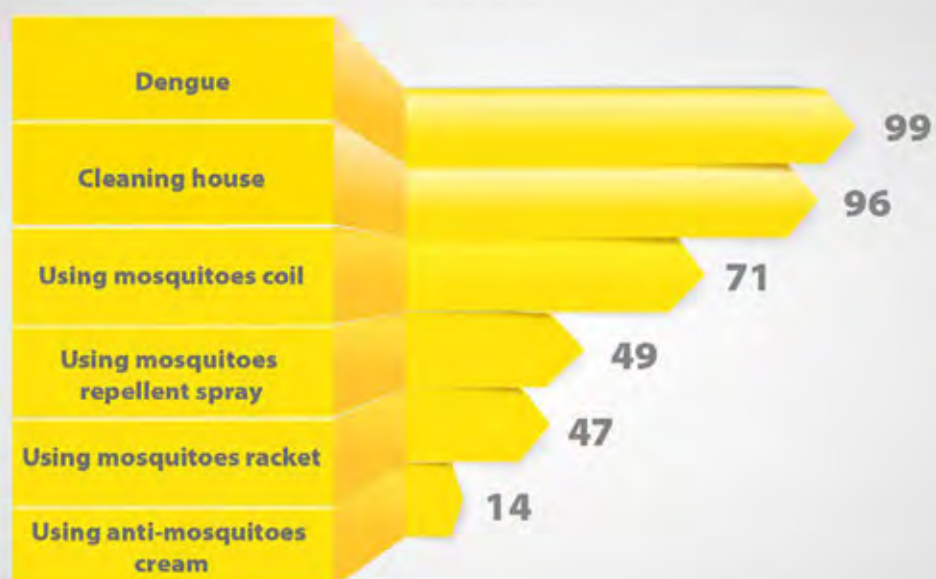

Có rửa, thay nước các đồ dùng chứa nước 1 tuần/ 1 lần

Thu gom đồ phế thải quanh nhà

Đeo quần áo của người dân, phát quang bụi rậm

Hạn chế treo quần áo bẩn trên mắc áo. Cho trẻ ngủ màn, kể cả vào ban ngày.

Thường xuyên sử dụng những sản phẩm diệt muỗi & kem chống muỗi để bảo vệ bé khỏi muỗi đốt.

TAS Banking

Banking industry executives on:

- Outlook for the next 12-24 months
- Disruptive innovation and technology
- Customer engagement
- Government regulation

Panel of industry executives with Tas Bank, Citibank, ANZ, Westpac, and other major banks. The panel was moderated by Tas Bank's Managing Director, The Hon. Dr. Michael Smith.

Conversely, an artificial general intelligence engine would be something like IBM Watson, Eliza, Google Home or Apple HomePod, where they are expected to know a lot of subjects. This is still not completely mature so we are probably about 3 years away from the general intelligence machine being able to really mimic human functions and do effective tasks.

In the banking sector, there's a Gartner statistic that said 40 per cent of banking and finance jobs will be replaced by machines in the next 10 years. Within the next 3 years, 20 per cent of customer interactions will be performed by machines. It's coming like a freight train and will be a huge transformational change. The big AI commentators compare this to the same level of change to when electricity was introduced to the industrial revolution. The future of banking should be not only employees and machines working together to deliver great customer experiences, but it should be customers using machine learning and AI to interact with their bank. Machine to machine - toaster machine to banking machine can be tomorrow for those organisations who are really thinking about this.

AI implementation, how advanced are financial institutions compared to the

predominantly in the US, it is at the level of education, research. AI in Australia is exceptionally. There is a very different view here in the US than in Australia. There is not a conversation or debate about around AI in the Australian space. A tech company will spend a million so it is a significant investment. The fastest growing tech sector is up at the moment, growing 8 times the annual compound growth rate each year.

There definitely needs to be discussion at the board and executive team level and an AI strategy should underpin not only their digital strategy, but also their business strategy. It needs to be one of the top three strategic imperatives for banking going forward. The very best way to start is to undertake experimentation in small proof of concept and pilots of no more than \$100,000. If you can't trial and test an AI product under \$100,000 then there's a problem. There is no need to be spending millions of dollars on AI. Banks need to start very small and prove out commercial results first. If there are no commercial results, then don't proceed.

How Australian banks effectively grasped AI?
Australian companies are still really at the early stages of testing and trialing. We know that the banks are testing AI to some extent, but a lot of them are using contact centre vendors or chat bots which in AI is insufficient. What we now need is a much better education dialogue around AI strategy for banks where it's not just the big end of town. There needs to be a lot more engagement with the new AI machine learning companies who really are the ones trying to solve problems with AI.

Moving forward, do you feel positive about AI's trajectory?

I see AI very optimistically in that it can free up banking workers. Whether they are advisors, analysts or call centre workers. AI can assist workers undertake higher order work, such as solving problems. This is more interesting work for the employees and leads to a much better experience for the customer.

One of the risks we have at a strategic level in AI is that 90 per cent of global programmers for these machines are male so there is a risk that we are now hard coding a masculine lens into the way the machines operate. We need to get diversity into the platforms and how they are coded.
